- 30G Partition for GM full-size van

Bin Shelving

MODEL

- 524 Bin shelving unit 48" long with 3 shelves of medium bins and 2 shelves of small bins

Model 524

Benefits

Strong

Ranger Fleet products are built strong and durable. All Ranger components are built using heavy-gauge aluminum 6061T6 extrusion and powder coated steel. Ranger products often outlast the vehicle they are in and can be transferred to a newer van or truck.

Custom-fit

Ranger Fleet product line is constantly evolving to ensure we have the precise product applications required for your vehicle. Products are designed to fit with maximum efficiency. Proper fit translates into a better usage of the available work space.

Safe

Ranger Fleet equipment is free of sharp metal edges and provides a safe work environment. Aluminum shelf extrusions have rounded outside surfaces. Partitions and shelf ends are protected with a powder coat finish.

Lightweight

Ranger Fleet shelving units are fabricated with lightweight aluminum extrusions. This translates into maintenance and fuel savings, as well as more capacity for your payload.

Quiet

Ranger Fleet products give a quiet ride. By building and assembling to very precise tolerances, the end product comes out tight and rattle free. This means a more pleasant environment for the occupants of the vehicle.
